

BIO

Dr Lyndal Hugo is co-founder and CEO of Orlar, a company formed in 2014 in Australia to address issues of climate change mitigation and adaptation through enhanced energy, food and water security. The Orlar technology has been proven to have only net positive impacts on the environment and people.

Orlar mission is to provide the most nutrients to the most people, most sustainably. Recently Orlar received the first major investment in Vietnam from a global ESG focused climate change adaptation and development bank. This investment required four months of intense environmental, social and financial analysis.

Dr Hugo completed undergraduate degrees, PhD and Post- Doctoral appointments (University of Sydney) in environmental chemistry and residues in food chains. This was followed by twenty years of environmental accounting for some of the world's largest energy and agricultural companies. Dr Hugo was born and raised in the greatest nation on earth, Australia.
