

Sustainability Business Forum

October 11th, 2022

Abstract:

With the significant expansion in the daily use of data-intensive Internet services such as cloud services and digital platforms, businesses, economies and consumers are now dependent on data centers which have inevitably become some of the world's biggest consumers of power.

Mr. Yap Jin Yi, CEO of SUPERNAP (Thailand), the most sustainable data center with renewable energy in the country, will tell how data centers can improve their power efficiency with innovative technology and design, how the digital infrastructure can support corporations and governments to reach their sustainability goals while also enhancing cost savings, and how together, we can contribute to Thailand 's sustainable digitalization.

About the Speaker:

Yap Jin Yi is the Chief Executive Officer of SUPERNAP (Thailand), responsible for the overall company growth and delivery of the services portfolio. Yap Jin Yi has more 30 years of experience in senior management positions with more than a decade of strategic development, plan execution and regional development in digital infrastructure.

About SUPERNAP (Thailand):

SUPERNAP (Thailand) is a joint venture between Thai leading companies and Switch, the world leader in data center ecosystems and designs.

Built from the ground up to deliver high density, cooling, security, redundancy and energy efficiency to its clients, SUPERNAP (Thailand) delivers unparalleled added value, compliance, and peace-of-mind with zero downtime since its opening in 2017.
